

FUND STRATEGY

The Fund seeks to achieve its investment objective by investing in the common stocks of small and mid-cap companies which have the potential to deliver above-average long-term earnings growth, in which earnings and sales growth, valuation, and profitability are assessed through fundamental-based research. The Fund looks for companies which are market leaders in growth industries, have a strong brand name, and whose sales and earnings have increased at a consistent rate. The investment approach includes the analysis of company financial statements in addition to meeting with corporate managements.

GLOSSARY OF TERMS

P/E: The weighted average of the price/earnings (P/E) ratios of the equity securities referenced. The P/E ratio is calculated by dividing the current price of the stock by the trailing earnings per share for the past 12 months.

The Russell 2500 Growth Index measures the performance of the small to mid-cap growth segment of the U.S. equity universe. It includes those Russell 2500 companies with higher price-to-book ratios and higher forecasted growth values. You cannot invest directly in an index.

The Morningstar Mid Cap Growth Portfolios feature firms that are projected to grow faster than other mid-cap stocks. The U.S. mid cap range for market capitalization typically falls between \$1 billion and \$8 billion and represents 20% of the total capitalization of the U.S. equity market. Growth is defined based on fast growth (high growth rates for earnings, sales, book value, and cash flow) and high valuations (high price ratios and low dividend yields).

DISCLOSURES

Mutual Fund investing involves risk. Principal loss is possible. **Past performance is not a guarantee of future results.** The Fund invests in smaller companies, which involve additional or special risks such as small companies rely on limited product lines, financial resources and business activities that may make them more susceptible than larger companies to setbacks or downturns; and small cap stocks are less liquid and more thinly traded which make them more volatile than stocks of larger companies.
